LEARNING OBJECTIVES:

The participant will gain knowledge of various diseases of the oral and maxillofacial region. The main objectives of this course are for the participant to;

1. Identify, recognize and detect Oral & Maxillofacial disease pathogenesis
2. Correlate the histopathology with the clinical presentation of a disease
3. Investigate Oral & Maxillofacial clinical problems and reach a working differential diagnosis
4. Be able to interpret a pathology report using histopathology descriptive terms.

At the completion of this course participants should be able to do the following:

1. Understand the importance of the differential diagnosis and management of vesiculobullous, ulcerative and white lesions.
2. Understand the importance of the use of biopsy in the diagnosis and management of vesiculobullous, ulcerative and white lesions.
3. Among the conditions discussed are cysts and neoplasms of teeth and their bony and soft tissue supporting structures.

Faculty:

Prof. Dr. Amal Hassan, Department of oral pathology
