Dental practitioners will be provided with a review of commonly performed oral surgery procedures. Emphasis will be on dento-alveolar surgery, surgical extractions, biopsy techniques and minor pre-prosthetic surgery.

Objectives:
Through lectures and discussions participants will:

- Develop treatment protocols for common oral surgery procedures.
- Review surgical complications and their appropriate management.
- Recognize appropriate instrumentation and proper utilization of surgical instruments.
- Learn surgical techniques involved in exodontias, biopsy and minor pre-prosthetic surgery

Program topics

- Armamentarium for basic oral surgery.
- Principles of exodontias/impacted teeth
- Basic pre-prosthetic surgery
- Management of surgical complications
